One of the greatest challenges faced by Automotive OEMs and Suppliers today is maintaining a seamless process to work with a supplier or customer network. Each automotive company and/or location has invested heavily in building its supply chain management system, ERP infrastructure and other computerized systems over time. This has included implementing and maintaining the hardware, software, protocols, and standards necessary to monitor internal information and communicate with other external parties as well. Replacing existing infrastructure is time consuming and cost prohibitive.

At Covisint, we realize that ensuring that secure, reliable B2B information is shared across increasingly complex technology systems and platforms can be difficult and expensive. Covisint’s Supply Chain Engagement solution connects disparate solutions and allows them to work with each other through seamless integration. In addition, it is easily scalable to handle massive volumes of transactions generated by many different systems.

Covisint enables automotive organizations like yours to securely exchange information across the largest B2B platform in the world. Our Supply Chain Engagement solution is cloud-based and provides on-demand connectivity and communication to organizations of any size or location. For EDI services, we provide solutions at various levels of technological sophistication, such as machine-to-machine communication, web-based, document based and more. So, no matter what your requirements are, we can fulfill them.

Additionally, Covisint leverages industry-leading mapping, routing, translation and network interconnectivity services to drive real-time, secure, and reliable B2B communications across your existing systems and processes. With our Supply Chain Engagement solution, organizations like yours are able to reduce cost, lower complexity and virtually eliminate the risk of information and application sharing. We do this by providing a wide variety of best-in-class Supply Chain Engagement solutions.

Covisint Supply Chain Engagement solutions allow your organization to realize the following benefits:

- Allows secure sharing of global information and data
- Provides complete visibility to supplier and OEM transactions in one secure location
- Converts and standardizes data between organizations
- Includes Automotive Business Process Dashboards so you may gain visibility into the status of orders within a process, such as order-to-cash or purchase-to-pay dashboards
- Promotes flexibility, allowing trading partners or customers to communicate through their “own language or system”
- Reduces your costs while allowing you to remain agile
- Leverages a single partner to connect with all trading partners around the globe
- Offers anytime, anywhere support with industry-leading SLAs and uptime
Security and Single Sign-On

Covisint’s security layer provides the foundation for secure collaboration with suppliers and constituents. With Covisint’s Single Sign-On (SSO) users securely login once with Covisint and seamlessly access multiple connected domains, wherever they may reside. Covisint radically reduces complexity and cost of registration, provisioning and password administration through a set of simple, self-service tools. Covisint provides “trusted third-party power” to ensure policy enforcement, compliance and auditability.

Web 2.0 & Beyond

Rather than simply providing a web interface to access information (Web 1.0), supplier portals have transformed to serve as the main communication vehicle among organizations — enabling internal and external users to share knowledge and collaborate on all aspects of business.

Web 2.0 possesses attributes that have a social dimension of interactivity and interconnectivity. It includes new models for social media, community and collaboration that can be leveraged inside and outside the enterprise such as: wikis, blogs, elearning videos and tutorials, idea and content management, community forums, surveys, ratings, comments, and tags, and social searching.

Supplier Chain Engagement Solutions Typically Expose:

Process Documentation

- Terms and Conditions
- Survey’s and Questionnaire
- Supplier Process Documentation
- EDI Standards and Guidelines
- Corrective Action Documentation

Personalization

We work with you to personalize the “look and feel” of your supplier portal. Having worked with many companies on how the information is presented and branded, Covisint works with you on what data you want to expose to your suppliers. Whether your organization requires a simple or more integrated solution, we know personalization is important in differentiating your supplier experience.

On-Demand Service Delivery

As a recognized pioneer in cloud computing, Covisint has driven the on-demand evolution in the way enterprises connect, communicate, and collaborate with their suppliers. Covisint Supplier Portal solutions are offered in a software-as-a-service (SaaS) delivery model and can be deployed in just 30-60 days.
